

Company Profile

IMAGINET[®]
Turning Imaginations into Reality

A Brief Overview

Imagnet Ltd is a total IT service delivery and consultancy company. The company was conceived in 2002 and incorporated in 2003 by a team of highly trained and talented professionals who wished to pool their talents and experience with a main purpose of providing a better focused and results oriented professional service in the IT sector. We presently have 15 permanent staff members.

Imagnet Ltd builds its confidence through sound fundamentals, proven history, and robust infrastructure. Committed to the highest standards of corporate governance and information transparency, led by a team of visionary executives and widely recognized management practices, Imagnet Ltd. provides a full range of services, heterogeneous technology skills, and a robust delivery framework.

Our Company

Founded and incorporated in 2003 in Uganda, Imagnet Ltd is a fully Ugandan owned IT solutions provider and implementer based in Uganda and Rwanda.

Experience

The company is as a result of a merger between Eagleimedia limited and Tele-dogs limited whose total experience in web applications is over 10 years. Our developers have a wide range of skills, ranging from Multiplatform client/server systems development, to Internet Application design and integration.

Company Vision

To empower business in Africa by bridging the digital divide.

Company Goals

- To promote the use of computing as an aid to business productivity.
- To tailor web and Desktop solutions to our client's goals and the needs of their audience.

Company Mission

To develop dynamic, client friendly applications, suited to a changing world.

Our Services

Imagnet Ltd specializes in the design of Business Information and management Systems. These include Custom Business solutions, Business software, Web Design & Hosting and server-based applications among others.

A. Innovative Solutions

Software Solutions And Applications

We design and implement software solutions for the Windows® platform. Our software can be anything from a simple accounting solution to a vast database system with terminals spread over the country.

File Management & Backup System (E-box File)

E-Box file gives you the best and comprehensive tools to flexibly create, manage and share documents online with your friends or workmates. This system stores files in a secure environment, inaccessible by anyone that is not authorized.

This web-based application gives clients a hassle free environment to securely store & backup data with little strain to the pocket.

It can further be expanded to a Data Warehousing solution for large companies.

Human Resource Management & Payroll System

Human Resource Management System shapes an intersection in between human resource management (HRM) and information technology.

The Payroll module automates the pay process by gathering data on employee time and attendance, calculating various deductions and taxes, and generating periodic payment employee Pay As You Earn tax, and NSSF contribution reports. Data is generally fed from the human resources and time keeping modules to calculate automatic deposit and manual check writing capabilities.

This module can encompass all employee related transactions as well as integrate with existing financial management systems. Imaginet has developed this system to administer the benefits of its use and track employee participation at work.

Customer Care Management System

The Customer Management System forms a key part of any company by providing an interactive, efficient and work focused electronic information gathering process for a company.

The Customer Management System gathers all the information about the client say the name, address, orders, payments etc. This helps companies follow through the entire process of managing their customers. According to research, companies using customer management systems are performing 15 percent better than competitors, according to new research from the University of Maryland's Robert H. Smith School of Business.

Higher Institutions Online Learning System

ELearning is a general term used to refer to a form of learning in which the lecturer and student are separated by space or time where the gap between the two is bridged through the use of online technologies.

In distance education Universities like Kampala University with many campuses in different area plans teaching/learning using a wide spectrum of technologies mainly Internet to reach learners at a distance.

Lately in most Universities worldwide, ELearning is used to define a specific mode to attend a course or programs of study where the students rarely, if ever, attend face-to-face or for on-campus access to educational facilities, because they study online. At Imaginet, we have created an online learning system that has helped universities like Kampala University to achieve this. This is a turnkey solution that can be used in any institution of learning whose students are off campus.

Hospital Management System

A hospital management system is a complete solution for use in all hospital departments. Our hospital Management System not only provides an opportunity to the hospital to enhance their patient care but also can increase efficiency of management of the entire institution. Our hospital Management System would enable hospitals to serve the rapidly growing number of patients in a cost-effective manner. The Hospital administrators would be able to significantly improve the operational control and thus streamline operations. This would enable to improve the response time to the demands of patient care because it automates the process of collecting, collating and retrieving patient information.

The senior Doctors would spend his precious time more in clinical activities than to put in clerical activities otherwise. This Hospital management system saves a lot of time which is then allocated for special jobs only. Very important for some, the reduced cost of the manpower would pay for the cost of this system within a short time after its implementation.

Accounting Software

Imaginet's accounting software is an application software that records and processes accounting transactions within functional modules such as accounts payable, accounts receivable, payroll, and trial balance. It has been developed with core modules and non Core Modules

B. Innovative Designs

Web Media Design

We design cutting edge dynamic web sites, which act as mini applications. We design websites which dynamically display information. We have designed dynamic websites for clients like Uganda Telecom, NSSF Uganda, Joint medical Stores, PSF Rwanda, Rwanda Expo, RwandAir, AMD Holdings, New times Rwanda, Uganda Record, Oxbridge Uganda, Kampala International University online learning system, Makerere University School of public health and many others.

Web Application Design

Should the client require professional web applications, we design and implement a host of solutions, from complex ELearning Systems, to simpler online tracking systems. We have programmed, amongst others, a customer-care feedback system for Uganda Telecom, a supply chain system for Uganda Telecom, an online resume database for UNISIS, an online statement reporting system for NSSF Uganda, an online Payment System for DSTV in Rwanda, an online asset tracking system for Face Oceans Frieght and similar smaller client applications.

We also develop web portals. A web portal is a site that provides a single function via a web page or site. Web portals often function as a point of access to information on the World Wide Web. Portals present information from diverse sources in a unified way. Aside from the search engine standard, web portals offer other services such as email, news, stock prices, infotainment and various other features. Portals provide a way for enterprises to provide a consistent look and feel with access control and procedures for multiple applications, which otherwise would have been different entities altogether. This we do on a case by case basis where clients know exactly what they are looking for. We have currently completed a Web portal for The New Times EClassifieds advertising, a web directory for the members of PSF Rwanda.

We have further developed specialized web applications like an internet radio for Radio 10 Rwanda, Online newspapers like New Times Rwanda, Uganda Record, Online magazines like Hope Rwanda, Inzozzi In-flight Magazine & 256 News Online.

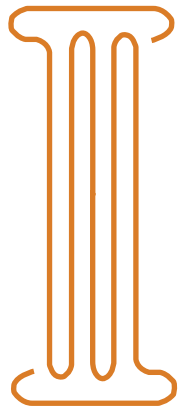

Web Hosting

We offer website hosting as another service of our business and all our Web Hosting Servers are located in the US. With this affiliation, we offer a very high standard level agreement of service availability backed by provision of power from three national grids and state of the art building management controls and security and 24 hours manned environment. This is the only way to achieve the level of reliability we strive on a daily basis.

We guarantee 99.9% uptime.

We consider quality services for the cost of those services to be excellent value for money. We are not interested in cutting corners and reducing the costs of our services.

Our Hosting clients include Makerere University School of Public Health, Public Sector Federation Rwanda, The New Times (Rwanda), The Uganda Record, Uganda Jobline, RwandAir, Public Procurement and Disposal Authority (Rwanda), Finance Trust, Oxford Cambridge Ugandan Alumni, AMD Holdings and many more.
